*Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-16, drawn to a method for enhancing cystic fibrosis transmembrane conductance regulator (CFTR) activity in an epithelial cell expressing a mutant CFTR, classified in class 435, subclass 325.
- II. Claims 17-23, drawn to a CFTR polypeptide capable of binding a molecular chaperone and enhancing CFTR channel activity when present in a cell expressing a mutant CFTR, classified in class 530, subclass 350.
- III. Claim 24 (fully) & claim 26 (in-part), drawn to a method of enhancing mutant channel activity in a cell comprising contacting said cell with an inhibitor of molecular chaperone activity, classified in class 435, subclass 69.2.
- IV. Claim 25 (fully) and claim 26 (in-part), drawn to a method of enhancing mutant channel activity in a cell comprising contacting said cell with an inhibitor of molecular chaperone expression, classified in class 435, subclass 6.

2. Inventions II and I & III-IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (M.P.E.P. § 806.05(h)). In the instant case the CFTR polypeptide, as claimed in Group II, can be used in a materially different process other than the method of enhancing CFTR activity,

Art Unit: 1652

or mutant channel activity claimed in Groups I & III-IV, such as use of the CFTR polypeptide in a method to produce antibodies.

3. The methods of Inventions I & III-IV are related in that each method requires the use of II. However, the steps and end points of the methods are wholly different and therefore each of the method Inventions I & III-IV are patentably distinct from the product invention II.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. The examiner has required restriction between product and process claims. Where applicant elects claims directed to the product, and a product claim is subsequently found allowable, withdrawn process claims that depend from or otherwise include all the limitations of the allowable product claim will be rejoined in accordance with the provisions of MPEP § 821.04. **Process claims that depend from or otherwise include all the limitations of the patentable product** will be entered as a matter of right if the amendment is presented prior to final rejection or allowance, whichever is earlier. Amendments submitted after final rejection are governed by 37 CFR 1.116; amendments submitted after allowance are governed by 37 CFR 1.312.

5. A telephone call was made to Carmella Stephens on January 11, 2006 to request an oral election to the above restriction requirement but did not result in an election being made.

6. Applicants are advised that the reply to this requirement **MUST** include an election of the invention to be examined, even though the requirement be traversed (37 CFR 1.143).

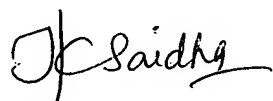

7. Applicants are reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tekchand Saidha whose telephone
